* ASR = Age Standardised Rate. This is the rate for ages 0-14 years standardised according to a uniform age distribution, i.e. the rate obtained by averaging the age-specific rates weighted as though there were equal numbers of children in each five year age group

Table 3.4 Astrocytoma

Age-specific & age-standardised rates (per million) for 1969-93 for England, Wales & Scotland county districts subdivided by quintiles of socio-economic status, degree of overcrowding, population density & urban/rural classification

Carstairs index of socio-economic status

	Age (years)								ASR*
	0-4		5-9		10-14		0-14		
	No	Rate	No	Rate	No	Rate	No	Rate
